

Baby Measuring Table

Model : SE416MEASURTBL

This quality measuring board makes it quick, easy and safe to measure both babies and infants up to 1 meter tall. Designed for use in paediatric practices, hospitals or for home visits by midwives and paediatricians.

It has curved edges to help keep babies in a safe position and the footpiece slides smoothly then can be locked into position. This means the baby can be attended to in between measuring and recording the measurement.
