

Space Logger

Model : GY2999

Our compact T10 Space Logger is designed to record data generated by operational equipment such as weighing devices. The data can then be easily and conveniently saved to a SD Card and transferred to your PC. It is versatile, economical and provides a standalone, paperless solution to data capture which is then available for further analysis and record keeping.

The T10 Space Logger is a universal serial data recorder that supports a range of ASCII text logging applications from RS232 and TTL/CMOS compatible data sources. It can be used with any Wedderburn Digital Indicator that has a RS232 port.

FEATURES

- universal Space Logger for ASCII text
- RS232 or TTL/CMOS interface with data source
- SD memory card capability for high capacity data storage and easy data transfer
- data can be stored in standard easy to read text files
- compact size

Dimensions (mm): 67 (W) x 67 (D) x 28 (H)
